Wetlands Rich Habitat important places

THREATENED VEGETATION COMMUNITIES PRESENT
area:
• *Melaleuca ericifolia* Swamp Forest
• Freshwater Aquatic Sedgeland and Rushland

SEYMOUR - A WETLAND WITH A HISTORY
Seymour was surveyed as a town in 1856 after coal was found in the area. The wetland was used to source clay for brick making.

GREEN AND GOLD FROG
Litoria raniformis
The rare and threatened species is found here.

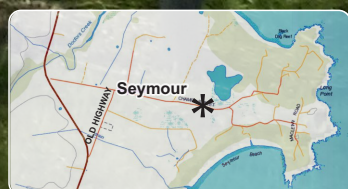

HOME to a wide variety of plants and animals depending on fresh water.

BIRDS frequenting wetlands on Tasmania's east coast include the migratory species: Golden Plover, The Sharp-tailed Sandpiper and The Ruddy Turnstone.

The **FRESHWATER** Wetland covers an area of 6.5 hectares. Seldom dry, the water levels vary depending on rainfall and evaporation.

Guest Speakers:

Todd Dudley - North East Bioregional Network, Ecological Restorations
Peter Stronach - Landcare Tasmania celebrating their 25th anniversary
Sue Lovegrove & Adrienne Eberhard - The Voice of Water - Sensory perceptions of wetlands

* Location of Seymour - Long Point car park
